Praxis Dr. Petra Freudenthaler-Karan

This two story doctor's surgery uses the topography of the area to allow both the ground level doctor's surgery as well as the overlying residential area and social areas to be accessed at ground level. The surgery is around 180 square meters and is open-plan and fully accessible by wheelchair. A central atrium compensates for the unfavorable alignment of the north slope. The climatically conditioned, in parts far projecting, flat roof defines the external appearance of the building.
